

D619: Introduction to ASME B31.3 Process Piping Code

Instructor(s): Don Frikken

2 Days

Competence Level:
Awareness

Virtual Course

Summary

This Distance Learning course will be scheduled as a series of three-hour long webinars over a four-day period (equivalent to a two-day classroom course), comprising a mixture of lectures, discussions, case studies, and worked examples to be completed by participants during and between webinar sessions.

This two-day course will introduce participants to the ASME B31.3 Process Piping Code. The Code provides requirements for the design, fabrication, examination and testing of metallic piping systems designed for the wide variety of fluid services used in the process industries. Selection of materials, pipe, valves and fittings will be discussed. Participants are encouraged to bring a copy of the code (not included in course fees) to the session. Each session is conducted in a lecture/discussion/problem solving format designed to provide intensive instruction and guidance on understanding Code requirements. The instructor will be available following each day's session to provide participants with further opportunity for discussion and consideration of specific problems.

Learning Outcomes

Participants will learn to:

1. Develop an understanding of when the rules of ASME B31.3 should be applied.
2. Choose ASME B31.3 fluid service designations for specific applications.
3. Develop an understanding of the advantages and limitations of various types of piping components.
4. Recognize when to seek help to select materials of construction.
5. Select wall thicknesses and component ratings based on design pressure and design temperature.
6. Define fabrication and installation requirements for piping systems.
7. Select examination and testing methods for piping systems.

Duration and Training Method

A virtual classroom course divided into 4 webinar sessions, comprising lectures, discussion, case studies, and practical exercises to be completed by participants during and between sessions.

Who Should Attend

Engineering, design, construction, maintenance, quality assurance, inspection and manufacturing personnel who work with process piping (e.g., in the chemical, petroleum, plastic processing, pulp and paper, and bioprocessing fields) will find it a time-saving means to broaden and update their knowledge of piping.

D619: Introduction to ASME B31.3 Process Piping Code

Instructor(s): Don Frikken

2 Days

Competence Level:
Awareness

Virtual Course

Course Content

Session One

1. Introduction
 - a. General Definitions
 - b. Piping Development Process
 - c. B31 Piping Codes
 - d. The ASME B31.3 Code
 - e. Fluid Service Definitions
2. Metallic Pipe & Fitting Selection
 - a. Piping System Failure
 - b. Bases for Selection
 - c. Listed versus Unlisted Piping Components
 - d. Fluid Service Requirements

Session Two

2. Metallic Pipe & Fitting Selection (cont.)
 - e. Piping components
3. Materials
 - a. Strength of Materials
 - b. Bases for Design Stresses
 - c. B31.3 Material Requirements
 - d. Deterioration in Service

Session Three

1. Pressure Design (metallic)
 - a. Design Pressure & Temperature
 - b. Quality & Weld Joint Strength Factors
 - c. Pressure Design of Components
 - d. Piping Material Specifications
2. Valve Selection
 - a. Code Requirements
 - b. Selection by Valve Type
3. Introduction to Flexibility Analysis
 - a. What are we trying to achieve?
 - b. Flexibility Analysis Example

Session Four

4. Fabrication and Installation
 - a. Welder/Brazer Qualification
 - b. Welding Processes
 - c. Weld Preparation
 - d. Typical Welds
 - e. Preheating & Heat Treatment
 - f. Bending & Forming

D619: Introduction to ASME B31.3 Process Piping Code

Awareness

Virtual Course

-
- g. Typical Owner Added Requirements
 - h. Installation
 - i. Flange Joints
 - 5. Inspection, Examination and Testing
 - a. Inspection
 - b. Examination
 - c. Leak Testing
 - 6. Systems
 - a. Instrument Piping
 - b. Pressure Relieving Systems
